Figure 1 Schoenfeld’s residuals of the variables: highly active antiretroviral therapy (HAART), CD4+ cell count at baseline and exposure category, for the general model.
Figure 2 Schoenfeld’s residuals of the variables: highly active antiretroviral therapy (HAART) and CD4+ cell count at baseline, for men who have sex with men (MSM).
Figure 3 Schoenfeld’s residuals of the variables: highly active antiretroviral therapy (HAART) and CD4+ cell count at baseline, for people who inject drugs (PWID).
Figure 4 Schoenfeld's residuals of the variables: highly active antiretroviral therapy (HAART) and CD4+ cell count at baseline, for heterosexuals.
