Supplementary Material 2  List of vector control strategies shared with participants.

Main strategies for *Aedes aegypti* mosquito control:

- Use of insecticides (larvicides and adulticides)
  - Use of household insecticides
  - Insecticide-treated screens and nets
  - Spraying open areas
- Ovitraps and larvitraps
- Management/reduction of reservoirs
- Health education for the general population
- Community participation
- Mass media campaigns
- Training of health teams
- Inter-sector coordination
- Advocacy (activities with informed influence by civil society on policymakers)
- Epidemiological surveillance as part of a control program
- Entomological surveillance as part of a control program
- Biological control: use of live organisms (insects, fish, etc.) to control the mosquito
- Coils/repellents
- Household inspection
- Others
